1. Purpose

This report aims to ensure that the website meets the highest standards of quality and provides an optimal user experience for residents, visitors, and business owners. Through systematic testing of key features, such as navigation, accessibility, responsiveness, and interactive elements, the objective is to identify and document any issues or potential improvements. This process ensures that the website aligns with its goals of serving as an informative, user-friendly, and accessible digital platform for the community.

2. Overview

- a. The Tiberias Municipality website is a vital platform tailored to meet the unique needs of the city's residents, visitors, and stakeholders. As a city rich in history and situated on the shores of the Sea of Galilee, Tiberias attracts both local and international visitors, necessitating a website that seamlessly integrates municipal services, cultural highlights, and tourist information. The site provides access to essential features such as municipal updates, event schedules, historical insights, and online service portals.

5. Conclusions & Recommendations

The TIBERIUS MUNI website demonstrates solid core functionality, with users able to access key municipal services and information. While several interface and technical issues need attention, they don't compromise the site's primary functions. The highest priorities should be resolving language switching, form validations, and security certificates. I recommend focusing first on navigation improvements, followed by core features and UI consistency. Additional QA resources during the testing phase would help ensure comprehensive verification of all fixed components before release.

6. Exit Criteria

(Deadline: Within 30 Days)

1. Critical Navigation (Approx. 7 days)
 - Menu visibility/functionality
 - Language switching works
 - Search functions properly
2. Core Features (Approx. 7-10 days)
 - Events display correctly
 - Forms submit without errors
 - Load times meet performance targets
3. Technical Requirements (Approx. 10-14 days)
 - All links functional (no 404s)
 - Security certificates valid
 - Mobile compatibility verified
4. Content/UI (Approx. 20 days)
 - Consistent imagery across sections
 - Field validations work
 - All pages load with proper formatting

- Final QA Sign-off: 30 days.
